Dad Seriously!

This is a python project using the Telegram api to make requests and get post to responses to users in the telegram chat.

To run this project you will need the API Token:

- 5145292688:AAEkvV8IoNWKXQmsRlva2EOHpMeILaiPciQ

In the source you will find the 1st line after the imports which reads

- Bot = telepot.Bot(os.getenv('BOT_TOKEN'))

Alternatively you can set the api token as a global environment variable

How to run the program:

1. From your commandline, navigate to to the directory in which the python file DadSaid.py and DadSeriously.txt are saved in .
2. Now run the command python DadSaid.py
3. Once the program is running, it will through a function and create a session . At this point you can log in to your telegram account on your cellphone on any other device, and Seartch for the Bot Name: **Dad-Seriously,** or alternatively you can search the bot's username: @DadSaidbot . Keep in mind that these names are case sensitive.
